

# *A Better View into Breast Cancer*

The MammoView  
Imaging System

*MammoView*

LEADING THE INTRADUCTAL EVOLUTION

# For clear intraductal endoscopic examinations and intervention where almost all breast cancer begins

The MammoView Imaging System is designed to:

- Distinguish and inspect suspicious pre-cancerous lesions undetectable by other methods
- Perform related intraductal procedures with direct visualization of the tissues of interest
- Complement existing diagnosis and treatment options with direct endoscopic observation

## Breast Endoscopy Innovation from CYductDX

Breast Endoscopy also known as mammary ductoscopy, is designed to provide physicians the means to detect, diagnose, and treat breast cancer years before surgery, physical exams or other external imaging can reveal evidence of the disease.

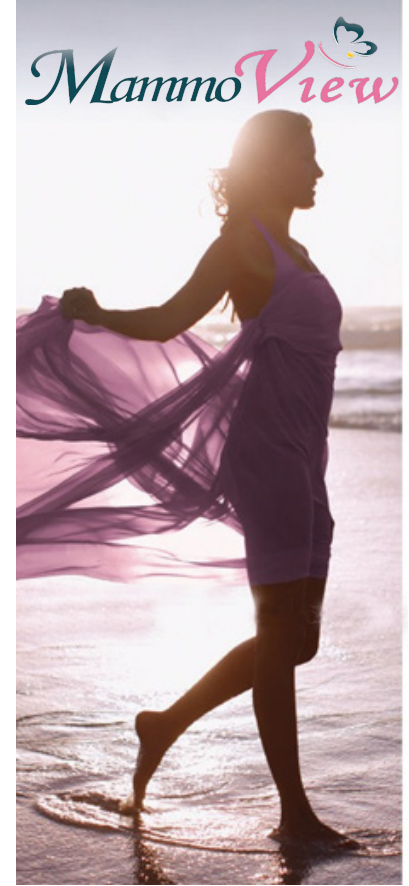

CYductDX offers state of the art endoscopic technology for enhanced viewing during endoscopic breast procedures.

CYductDX's MammoView System employs advanced micro-endoscope and optical technology to give physicians sharp, clear images of the milk ducts, where the majority of all breast cancers arise.

The MammoView intraductal devices are designed to provide direct observation with any endoscopic video system while providing unprecedented image quality, using advanced minimally invasive technologies and tissue preservation techniques. Physicians can clearly see the boundary between healthy and abnormal tissue.

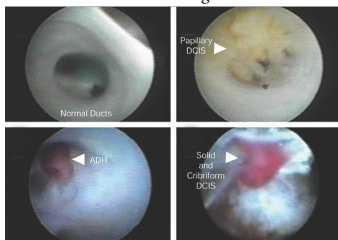

The MammoView Breast Endoscopy System is designed to support a range of treatment options such as duct excision, surgical biopsy, lumpectomy and other intraductal therapies.

The MammoView Breast Endoscopy System for mammary ductoscopy is designed to make it easy to directly observe the distinction between healthy and abnormal tissue within the mammary ducts.

*Leading hospitals and clinics use the MammoView Endoscopic Systems to perform numerous minimally invasive endoscopic procedures. Now that the benefits of ductoscopy is available to the breast care medical community.*

Ductal Images

### Breast Endoscopy Product Line

### Description of Enhanced Depth Cue Components

### Product #

MammoView Ductoscope	Multi-use Microendoscope - .9mm diameter, 10cm length	BE1000
MammoView Introducer Cannula	Facilitates irrigation, visualization, and analysis from within mammary ducts. 9mm dia., 10cm length	BE2500
MammoView Camera Coupler	Dedicated Optical Coupler for ductoscope for use on all major brand endoscopy video systems	BE3000
MammoView Dilator Set	For easy dilation of mammary ducts prior to ductoscopy. Three sizes: S - M - L	BE4000
MammoView Cytology Kit	Mammary ductal epithelia cell retrieval kit with aspiration	BE8000
